

influence investor confidence, which in turn can have a negative effect on exchange rates, security prices or other assets in emerging markets.

The exchange rates and the prices of securities and other assets in the emerging markets are often extremely volatile. Among other things, changes to these prices are caused by interest rates, changes to the balance of demand and supply, external forces affecting the market (especially in connection with important trading partners), trade-related, tax-related or monetary policies, governmental policies as well as international political and economic events.

In most cases, the securities markets in the emerging markets are still in their primary stage of development. This may result in risks and practices (such as increased volatility) that usually do not occur in developed securities markets and which may have a negative influence on the securities listed on the stock exchanges of these countries. Moreover, the markets in emerging-market countries are frequently characterized by illiquidity in the form of low turnover of some of the listed securities.

In comparison to other types of investment that carry a smaller risk, it is important to note that exchange rates, securities and other assets from emerging markets are more likely to be sold as a result of the “flight into quality” effect in times of economic stagnation.

Frontier markets are a subset of emerging markets that are too small to be considered an emerging market.

Investments in Russia

If provided for in the special section of the Sales Prospectus for a particular sub-fund, sub-funds may, within the scope of their respective investment policies, invest in securities that are traded on the Moscow Exchange (MICEX-RTS). The exchange is a recognized and regulated market as defined by Article 41 (1) of the Law 2010. Additional details are specified in the special section of the Sales Prospectus.
